

# Come and join our tech team to build the optical quantum sensor of the future

## We are hiring! Thesis and working students

We are a Spin-Off at the Walter Schottky Institute (TU Munich) and develop cutting edge optical quantum sensors (superconducting single-photon detectors). We are searching for motivated students who want to join an agile and constructive tech team eager to learn and strive forward with our development and aims.

We offer an open and egalitarian culture and the latest equipment necessary to produce our highly specialized sensors. We will enable you to take ownership of your tasks within the project and make an impact from the first day on.

In cooperation with two chairs at TUM (Prof. Finley & Prof. Müller), we may offer you various exiting topics for your Bachelor and Master Thesis (physics, electrical engineering, systems engineering).

Also, we are always looking for highly motivated working students (physics, electrical engineering, systems engineering and computer engineering, 450 € basis).

Please contact us  
[info@munich-quantum-instruments.com](mailto:info@munich-quantum-instruments.com)

and send us a short CV (in German or English) and explain briefly why you want to join the MQI team.
